

Press Release – July 2016

---

### **RESILEX®, the new castor for handling**

The types of surfaces, the environment, the conditions of use, the supported loads...

GUITEL, castor manufacturer since 1918, revises its best-seller with a whole new made-in-France assortment, an updated design and above all, an innovative tyre endowed of an improved resilience.

#### **Made in France: guarantee of quality**

A tested know-how, a unique manufacturing quality, tyre, injection, component assembly, everything is produced in France.

The full control of the manufacturing process allows to promptly meet the materials handling and logistics professionals' needs.

#### **The major novelties of the RESILEX® castor**

- A ultra-elastic rubber tyre ensures a better resilience allowing the castor to retrieve its original shape following the unloading and to adapt itself to uneven surfaces,
- The more flexible rubber guarantees a lower noise level and more fluidity when passing over any obstacle,
- The top-dog ball bearing hub reduces starting forces and offers a smooth maneuverability,
- Its protective wheel guard prevents from the accumulation of dirt around the wheel axis,
- A reinforced mounting device enables a load capacity per castor between 200kg and 400kg depending on the castor's diameter.

#### **Some advantages for the user and the maintenance department**

An extended life span, reduced maintenance costs, a 5-year-guaranteed unseatable tyre.

Available in the following diameters (mm): 100, 125, 160 and 200, the RESILEX® castors are perfectly suitable for flight cases, office and workshop handling trolleys, scaffoldings... Last but not least, the new RESILEX® castor's specificities safeguard the user from risks of musculoskeletal conditions.
